

In nowadays all modern teachers had one most problem.

I think that the most problem of modern teacher's is a should be a much knowledge and high qualities for pupils.

In my opinion teacher's should not force their pupils to learn more then they can remember. Teacher's pupils often and often didn't learn materials. At my school one of the our teacher force a pupil learn a poem, but he don't have a good memory, and on the next day, he didn't learn a poem and get a bad assecement. After there incedent, math's teacher took an homework, and childrens should be learn some teorems of math. Many of a bad pupils didn't learn this teorems and get a bad accesement.

I think, that teacher should be divid these pupil on a group. The first group is a good pupils, and the second group is a bad pupils. Teacher should be divid a homework bothe a two group's.

In the real world, not all teachers can divid a pupal's and a homework, because many school's can't let a dividing pupils. At the schools of Russia, not divid a pupils, because Russia have another educational system.

I don't agree with the opposing opinion, because many pupils haven't got a good memory and a good skills, and he can't learn as a good pupil.

I think that all pupils should divid into groups, because not all pupils can a good learn, and teacher should be asses their capabilities.
